

CONNECT / TRIDENT INTEGRATION

Connect JobBOSS to the systems your business runs on.

Give third-party software and custom applications a governed way to work with JobBOSS, without replacing the ERP your team already knows.

BUILT FOR

For manufacturers, IT teams and software partners with a system to connect and a named technical owner.

THE PLATFORM BEHIND YOUR INTEGRATION

Trident provides the API. Your developer or integration partner builds the connection using defined JobBOSS operations and transaction validation.

CONNECTIONS WORTH MAKING

01 AP and document workflows

Pass validated invoice data from an AP platform to create an unposted JobBOSS invoice.

02 Receiving and warehouse systems

Look up open purchase-order lines and submit receipt details from a scanner or WMS integration.

03 Tool crib and material issues

Issue eligible inventory to a job and record its material cost through an integrated workflow.

04 Customer and internal portals

Retrieve supported order and delivery information for a portal with its own access controls.

INCLUDED IN THE PACKAGE

- Authenticated REST API
- Supported JobBOSS reads and transactions
- JobBOSS-specific validation
- No AI platform required

START WITH ONE CONNECTION

Choose one system handoff, identify its data requirements and technical owner, then scope and test the integration before expanding.

Which system should connect to JobBOSS?

Request current site-license pricing | neptunenetworking.com/trident

Trident supplies the API, not a prebuilt connector for every system. Installation, integration development and third-party services are separately scoped.
